

**Roofing:**

10) Add the paper roofing using white glue, beginning at the bottom of each roof panel, overlapping and staggering each strip as you move up the roof (see diagram). Paint the shingles and then highlight them with a drybrushed lighter color.

**Chimney and planter boxes:**

11) The resin chimney can be mounted by either cutting a hole in the roof or by sanding the bottom to the proper angle to match the roof.

The two planter boxes can be added to the front and sides of the porch as shown. These can be decorated with shrubs or foliage of your choice. We've found that Woodland Scenics coarse turf or foliage clusters glued onto the top of the boxes works well. You can also use a small paint brush to add spots of bright color to the foliage to represent flowers.

Your kit is now completed and ready for your layout. We hope you've enjoyed this kit. If you have any problems or comments, please contact us at:
